

Study Program 2018 - 2019

Mathematical Engineering

Amsterdam/Diemen

Courses open to exchange students

08-02-2018

Disclaimer

This publication has been compiled with the greatest possible care, but no rights may be derived from its content. Courses described here can be replaced by other courses, change content or given in another term than indicated in this publication.

Introduction

An exchange student can compose his/her own program choosing any courses described in this document. However, when choosing courses from higher years we expect students to have the knowledge and skills from previous years. Also, when selecting courses from different years, the courses might have an overlap in scheduling making it difficult to attend both. Furthermore, the sending university (home university of the student) may impose restrictions on the program.

One term consists of 10 weeks. A program for a semester of 20 weeks (2 terms) consists of 30 credits (15 credits per term). In this document you can see which course will be scheduled in which term.

- Term 1: September - November
- Term 2: November - January
- Term 3: February - April
- Term 4: April – June/July

Ms. Margje Penning is the coordinator of the Exchange Students at Mathematical Engineering Amsterdam/Diemen. If you have any questions about the exchange program, if you want to consult about your possible program or if you need more information, please feel free to contact her.

Ms. Margje Penning

| Year 2..... | 33 |
| Term 1 | 33 |
| Scaling Networks (CCNA 3) - 3713IT211Z/3715EX015A..... | 33 |
| English 3 - 3713IT212Z/3715EX016A..... | 34 |
| Object Oriented Programming 2 - 3713IT213Z/3715EX017Z..... | 37 |
| Probability Theory - 3713IT232Z/3715EX018Z..... | 39 |
| Term 2 | 40 |
| Project Application Development - 3713IT221Z/3715EX019Z..... | 40 |
| Software Engineering - 3712IT233Z/3715EX024Z..... | 42 |
| UML - 3713IT224Z/3715EX006Z..... | 43 |
| English 4 - 3713IT245Z/3715EX021Z | 45 |
| Term 3 | 47 |
| Connecting Networks (CCNA 4) - 3713IT231Z..... | 47 |
| Geometry - 3713IT223Z..... | 48 |
| Graph Theory - 3713IT214Z/3715EX025Z | 49 |
| Algorithms & Datastructures 1 - 3713IT234Z/3715EX010Z | 50 |
| Research 2 - 3713IT235Z/3715ERAS2Z..... | 51 |
| Term 4 | 52 |
| Project Web Science - 3713IT241Z..... | 52 |
| Numerical Analysis - 3713IT243Z/3715EX027Z..... | 54 |
| Algorithms & Datastructures 2 - 3713IT244Z/3715EX013Z | 55 |
| English 5 - 3713IT246Z/3715EX014Z | 57 |
| Year 3..... | 59 |
| Term 3 | 59 |
| Research 3 - 3712IT332Z | 59 |
| Statistics 2 - 3712IT333Z..... | 60 |
| Operations Research - 3713IT334Z | 61 |
| Routing (CCNP 1) - 3712IT331Z | 62 |
| Switching (CCNP 2) - 3712IT335Z/3715ERAS3Z | 63 |
| Mobile Development 1 - 3713MBDV1Z/3715ERAS6Z..... | 64 |
| Term 4 | 66 |
| Project Engineering Entrepreneurship - 3713IT341Z..... | 66 |
| Troubleshooting (CCNP 3) - 3710IT424Z/3715ERAS4Z | 68 |
| Mobile Development 2 - 3713MBDV2Z/3715ERAS7Z..... | 69 |

| | |
|---|----|
| Year 4..... | 71 |
| Term 1 | 71 |
| Advanced Data Disclosure - 3712IT411Z | 71 |
| Distributed Systems and Parallel Computing - 3712IT412Z | 72 |
| Advanced Java Programming - 3711IT425Z | 73 |
| Research 4 - 3711IT422Z | 74 |
| Term 2 | 75 |
| Project Big Data - 3711IT421Z | 75 |
| Data Warehousing and Business Intelligence - 3712IT422Z | 77 |
| Data Mining & Analysis - 3711IT411Z..... | 78 |
| Cryptography - 3711IT423Z | 80 |

Summary

Year 1

Term 1

| Unit of Study | Name of Examination Component | Credits |
|---|-------------------------------|---------|
| Introduction to IT | Professionalization | 3 |
| Introduction to Networks (CCNA 1) | Routing and Switching | 3 |
| English 1 | Professionalization | 2 |
| Introduction to Programming with Python | Software Engineering | 3 |
| Precalculus | Mathematics | 4 |

Term 2

| Unit of Study | Name of Examination Component | Credits |
|----------------------------------|-------------------------------|---------|
| Calculus 1 | Mathematics | 4 |
| Advanced Programming with Python | Software Engineering | 3 |
| Project Casual Graphics | Software Engineering | 4 |
| Logic | Mathematics | 3 |

Term 3

| Unit of Study | Name of Examination Component | Credits |
|---|-------------------------------|---------|
| Research 1 | Research | 2 |
| DBMS 1 | Data | 4 |
| Routing and Switching Essentials (CCNA 2) | Routing and Switching | 3 |
| Calculus 2 | Mathematics | 4 |
| English 2 | Professionalization | 2 |

Term 4

| Unit of Study | Name of Examination Component | Credits |
|-------------------------------|-------------------------------|---------|
| Object Oriented Programming 1 | Software Engineering | 3 |
| Project Databases | Data | 3 |
| DBMS 2 | Data | 3 |
| Statistics 1 | Mathematics | 2 |
| Linear Algebra | Mathematics | 3 |

Condition(s) for Participation

Introduction to Networks (CCNA 1) is prerequisite for Routing and Switching Essentials (CCNA 2)

Year 2

Term 1

| Unit of Study | Name of Examination Component | Credits |
|-------------------------------|-------------------------------|---------|
| Scaling Networks (CCNA 3) | Routing and Switching | 3 |
| English 3 | Professionalization | 2 |
| Object Oriented Programming 2 | Software Engineering | 5 |
| Probability Theory | Mathematics | 5 |

Term 2

| Unit of Study | Name of Examination Component | Credits |
|---------------------------------|-------------------------------|---------|
| Project Application Development | Software Engineering | 5 |
| Software Engineering | Software Engineering | 3 |
| UML | Software Engineering | 4 |
| English 4 | Professionalization | 2 |

Term 3

| Unit of Study | Name of Examination Component | Credits |
|-------------------------------|-------------------------------|---------|
| Connecting Networks (CCNA 4) | Routing and Switching | 3 |
| Geometry | Mathematics | 3 |
| Graph Theory | Mathematics | 4 |
| Algorithms & Datastructures 1 | Mathematics | 3 |
| Research 2 | Research | 2 |

Term 4

| Unit of Study | Name of Examination Component | Credits |
|-------------------------------|-------------------------------|---------|
| Project Web Science | Mathematics | 5 |
| Numerical Analysis | Mathematics | 4 |
| Algorithms & Datastructures 2 | Mathematics | 3 |
| English 5 | Professionalization | 2 |

Condition(s) for Participation

Routing and Switching Essentials (CCNA 2) is prerequisite for Scaling Networks (CCNA 3)
 Scaling Networks (CCNA 3) is prerequisite for Connecting Networks (CCNA 4)

Year 3

Term 3

| Unit of Study | Name of Examination Component | Credits |
|----------------------|-------------------------------|---------|
| Research 3 | Research | 2 |
| Statistics 2 | Mathematics | 3 |
| Operations Research | Mathematics | 4 |
| Routing (CCNP 1) | Networking | 3 |
| Switching (CCNP 2) | Networking | 3 |
| Mobile Development 1 | Software Engineering | 6 |

Term 4

| Unit of Study | Name of Examination Component | Credits |
|--------------------------------------|-------------------------------|---------|
| Project Engineering Entrepreneurship | Professionalization | 10 |
| Troubleshooting (CCNP 3) | Networking | 4 |
| Mobile Development 2 | Software Engineering | 4 |

Condition(s) for Participation

All Routing and Switching courses (CCNA 1, 2, 3 and 4) are prerequisite for all CCNP courses.
Routing (CCNP 1) and Switching (CCNP 2) are prerequisite for Troubleshooting (CCNP 3)
Mobile Development 1 is prerequisite for Mobile Development 2

Year 4

Term 1

| Unit of Study | Name of Examination Component | Credits |
|--|-------------------------------|---------|
| Advanced Data Disclosure | Data | 5 |
| Distributed Systems and Parallel Computing | Data | 3 |
| Advanced Programming in Java | Software Engineering | 5 |
| Research 4 | Research | 2 |

Term 2

| Unit of Study | Name of Examination Component | Credits |
|--|-------------------------------|---------|
| Project Big Data | Data | 5 |
| Data Warehousing and Business Intelligence | Data | 2 |
| Data Mining & Analysis | Data | 4 |
| Cryptography | Mathematics | 3 |

Description of Units of Study

Year 1

Term 1

Introduction to IT - 3713IT112Z/3715EX001Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|--|--|-------------------------------|---------------------|----------------------------------|-----------------------|
| 1 | Term 1 | Professionalization | | No | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Introduction to IT, 3713IT112A/3715EX001A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | At Inholland Applied University Mathematical Engineering has chosen for the Information Technology (IT) as specialization. So the students need to get an idea what IT is today, for sure in relation to Mathematics. For each field of IT (like Hardware, Middleware, Methods & Technics, Project) an introduction to an advanced topic will be part of the class. | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Manage, Professionalize | | | | |
| Condition(s) for Participation | None. | | | | |
| Other details | None. | | | | |
| Examination criteria | Understanding IT concepts | | | | |
| Details on examination formats | Written exam | | | | |
| Instructional formats and education activities | Instructor-led theory sessions, self-tuition session and labs | | | | |
| Contact hours for instructional formats and education activities | 31 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | None | | | | |

Introduction to Networks (CCNA 1) - 3714IT111Z/3715EX003Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|--|--|-------------------------------|---------------------|----------------------------------|-----------------------|
| 1 | Term 1 | Networking | | No | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Introduction to Networks (CCNA 1), 3714IT111A/3715EX003A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | Introduction to Networks: Introduces the architecture, structure, functions, components, and models of the Internet and computer networks. The principles of IP addressing and fundamentals of Ethernet concepts, media, and operations are introduced to provide a foundation for the curriculum. By the end of the course, students will be able to build simple LANs, perform basic configurations for routers and switches, and implement IP addressing schemes. | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Analyze,Design,Realize,Maintain | | | | |
| Condition(s) for Participation | Skills exam is only open for students which has passed the theory exam | | | | |
| Other details | None | | | | |
| Examination criteria | Understand and describe the devices and services used to support communications in data networks and the Internet Understand and describe the role of protocol layers in data networks Understand and describe the importance of addressing and naming schemes at various layers of data networks in IPv4 and IPv6 environments Design, calculate, and apply subnet masks and addresses to fulfill given requirements in IPv4 and IPv6 networks Explain fundamental Ethernet concepts such as media, services, and operations Build a simple Ethernet network using routers and switches Use Cisco command-line interface (CLI) commands to perform basic router and switch configurations Utilize common network utilities to verify small network operations and analyze data traffic | | | | |
| Details on examination formats | On-line theory test. | | | | |
| Instructional formats and education activities | Instructor-led theory sessions and hands-on exercises in the lab | | | | |
| Contact hours for instructional formats and education activities | 31 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | N/A | | | | |

English 1 - 3713IT114Z/3715EX002Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|-----------------------------------|--|-------------------------------|---------------------|----------------------------------|-----------------------|
| 1 | Term 1 | Professionalization | | Yes | 2 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| English 1, 3713IT114A /3715EX001A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | <p>Most students enrolling in this course can be both from the Netherlands and abroad and in general will have a good command of the English language in order to be able to follow the courses of IT which are all taught in the English language.</p> <p>Nevertheless, English is an important language in the field of technology, especially information technology. Communication forms an even importance as IT staff needs to communicate with fellow staff and clients in the IT who are far from being an expert in computer science.</p> <p>During all five courses the emphasis will be on reading, writing, listening, speaking and communicating. The courses start with an emphasis on rehearsing the basics in grammar and will subsequently focus on speaking and writing. Especially writing will be the focus of attention and be presented in the form of letters, memos and reports in order to prepare the student not only for the final thesis, but also for the professional work field.</p> <p>The courses aim at for level C1 but preferably C2 of the CEFR.</p> | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Consultancy, Professionalize | | | | |
| Condition(s) for Participation | None. | | | | |
| Other details | Prerequisites: none, except that the level of English should at least be on B1, but preferably B2, of the CEFR (Common European Framework for References of Languages). | | | | |
| Examination criteria | <p><u>GRAMMAR & WRITING EXAM</u></p> <p>Further details about assessment:</p> <p>The exam consists of 60 questions based upon grammar, either by ticking the correct answer, or completing a field, counting for 60% of the grade.</p> <p>Furthermore a written assignment counting for 40%. Both assignments need to be above 55% of their applicable individual score.</p> <p>Assessment criteria</p> <p>Grammar questions in exam: Students pass at least 33 of the 60 questions of the grammar test (max 60 pts);</p> <p>Written assignment in exam: Students pass at least for a minimum of 22 points for the written test in the exam, based upon the following criteria (max. 40 pts):</p> <ul style="list-style-type: none"> - Style (max. 8 pts) - Conventions of a memo (max. 8 pts) - Grammar (max. 8 pts) - Use of language, such as complete and full sentences, academic vocabulary (max. 8 pts) | | | | |

| | | |
|--|---|--|
| | <ul style="list-style-type: none"> - Overall impression, including noticing pitfalls and providing extra details (max. 8 pts). <p><u>PRESENTATION</u></p> <p>The assignment consists of a group presentation on a designated topic, lasting 15 – 20 minutes including feedback and questions from class, in which each student speaks at least for 3 minutes, hence covering an equally divided balance between students in participation. The result needs to be above 55% of the applicable individual score.</p> <p>Assessment criteria</p> <p>The presentation is assessed on the following criteria:</p> <ul style="list-style-type: none"> - Used aids in media, such as PowerPoint, Prezi, Rocket Slide etc, attractiveness of the presentation (max. 10 pts) - Topic, complexness or execution of the assignment (max. 20 pts) - Pronunciation (max. 25 pts) - Structured presentation: head, body, tail, conclusion, including introduction of members, table of contents, attitude in front of class, meeting conventions for presentations (max. 25 pts) - Interaction with class during questions (max. 20 pts) <p>Students attending the presentation are required to ask questions, have a participating attitude and a keen eye for facts versus opinions.</p> | |
| Details on examination formats | Exam and in-term presentation | |
| Instructional formats and education activities | The instructional format and educational activities consist of 7 x 4 classes in the form of workshops and lectures in which a proactive, participating attitude is expected; an in-term group presentation which forms part of the final grade, followed by an individual exam. | |
| Contact hours for instructional formats and education activities | 31 | |
| Compulsory attendance | No | |
| Aids permitted | Reading requirements as indicated, dictionary. Exam: none. Presentation: to be decided by student(s). | |

Introduction to Programming with Python - 3714IT113Z/3715EX004Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|--|---|--|---------------------|----------------------------------|-----------------------|
| 1 | Term 1 | Software Engineering | | No | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Introduction to Programming with Python, 3714IT113A/3715EX004Z | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | <p>This course gives a first introduction to programming in general and more specific to Python.</p> <p>Good programming is about logical structuring and algorithmic thinking. Algorithms have to be designed in a systematic and structured way, in order to make the code easily readable and well maintainable.</p> <p>After successfully completing this course, the student understands the importance of good structuring in programming and the 'divide and conquer' principle. The student can apply this by creating a simple application using Python.</p> | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Analyze, realize and design | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | <p>For programming in general, the student</p> <ul style="list-style-type: none"> - understands and applies the division of responsibilities between files and functions (2.1.3), - uses a proper lay-out and informative comment lines (3.1.2), - understands what a variable is, what the scope and type of a variable is, why typing is important and what loosely typed means (3.1.2), - can construct a Nassi Schneidermann Diagram (NSD) from a given problem choosing the correct control structures and nesting the structures correctly (1.1.3). - can translate NSD to Python functions and vice versa (2.1.2),. | | | | |
| Details on examination formats | During the exam the student will answer open questions on paper and do programming assignments on the computer. | | | | |
| Instructional formats and education activities | <p>The contact hours are divided in lectures with exercises (1.5 hours each week) and lab sessions where the student will work on programming assignments (3 hours each week).</p> <p>The students are expected to prepare the lectures by studying the chapters and to prepare the lab sessions by making the exercises as indicated in the week overview.</p> | | | | |
| Contact hours for instructional formats and education activities | 45 | Lectures, lab session, self-study and working on assignments | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | N.a | | | | |

Precalculus - 3714IT116Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|--|---|-------------------------------|---------------------|----------------------------------|-----------------------|
| 1 | Term 1 | Mathematics | | Yes | 4 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Precalculus, 3714IT116A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | <p>Starting this course has two aims. The first aim is to bridge the possible gap between high school mathematics and the level of mathematics used during your study. The second aim is to accustom students from different nationalities to a common use of mathematical notation and language. To achieve this aim the following topics will certainly be covered: fractions, basic algebra, function, first and second degree equations, logarithms and exponentials.</p> <p>Continuing the course will introduce two important concepts, namely function, and limit.</p> | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Analyze and Realize | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | Basic calculus rules, functions, and limits. | | | | |
| Details on examination formats | Written exam. | | | | |
| Instructional formats and education activities | <p>Teaching method: tutorials, without calculator</p> <p>The teacher gives a short explanation of the theory, and explains homework questions</p> <p>The student practices problems during tutorials and makes homework according to the schedule, prepares questions for the teacher, practices with the trial exam</p> <p>Attendance is not mandatory, but is strongly recommended; the students responsibility is to keep track of treated theory, solved problems and instructions of the teacher</p> | | | | |
| Contact hours for instructional formats and education activities | 45 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | None | | | | |

Term 2

Calculus 1 - 3714IT121Z/3715EX020Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|--|--|-------------------------------|---------------------|----------------------------------|-----------------------|
| 1 | Term 2 | Mathematics | | No | 4 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Calculus 1, 3714IT121A /3715EX001A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | Every engineer must be able to apply the ideas of calculus in his later working career. In this course, the concepts of Derivative and Integration are introduced. Maple will help to understand and calculate these concepts | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Analyze and Realize | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | Derivatives and Integration | | | | |
| Details on examination formats | Written exam | | | | |
| Instructional formats and education activities | Lectures | | | | |
| Contact hours for instructional formats and education activities | 45 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | None | | | | |

Advanced Programming with Python - 3714IT122Z/3715EX005Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|--|---|---|---------------------|----------------------------------|-----------------------|
| 1 | Term 2 | Software Engineering | | No | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Web Programming 2, 3714IT122A/3715EX005A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | <p>This course continues on the course Introduction to Programming in Python. Good programming is about logical structuring and algorithmic thinking. Algorithms have to be designed in a systematic and structured way, in order to make the code easily readable and well maintainable.</p> <p>After successfully completing this course, the student will be able to create an application in Python using Math libraries.</p> | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Analyze, realize and design | | | | |
| Condition(s) for Participation | None, but it is advised to do the course Introduction to Programming in Python first. | | | | |
| Other details | None | | | | |
| Examination criteria | <p>For programming in general, the student:</p> <ul style="list-style-type: none"> - applies the 'divide and conquer' principle correctly by using include files and dividing code between files and functions (2.1.3); - uses a proper lay-out and informative comment lines (3.1.2); - can construct a Nassi Schneidermann Diagram (NSD) from a given problem choosing the correct control structures and nesting the structures correctly (1.1.3); - can convert a NSD to correct Python code and vice versa (2.1.; - can build a application using Python with Math libraries (3.1.1). - uses given functions correctly and knows how to find information on predefined Python functions and libraries (3.1.2). | | | | |
| Details on examination formats | During the exam the student will answer open questions on paper and do programming assignments on the computer. | | | | |
| Instructional formats and education activities | <p>The contact hours are divided in lectures with exercises (1.5 hours each week) and lab sessions where the student will work on programming assignments (3 hours each week).</p> <p>The students are expected to prepare the lectures by studying the chapters and to prepare the lab sessions by making the exercises as indicated in the week overview.</p> | | | | |
| Contact hours for instructional formats and education activities | 45 | Lectures, lab work, self-study and working on assignments | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | N.a | | | | |

Project Casual Graphics - 3714IT123Z/3715EX022Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|--|---|--|---------------------|----------------------------------|-----------------------|
| 1 | Term 2 | Software Engineering | | No | 4 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Project Casual Games, 3714IT123A /3715EX022A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | In this 'first' project you will apply what you learned so far in a 5-6 member team setting. This project is divided in four phases: Idea, Proof of Concept, Alpha release, Beta release. It will address project skills (planning, deadlines, meetings, and releases), professional skills (communication, presenting or demonstrating results) and technical skills (software development, math). | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Analyze and design | | | | |
| Condition(s) for Participation | None. | | | | |
| Other details | None. | | | | |
| Examination criteria | Demonstrate the ability to deliver sufficient product quality using Python. Manage your project and maintain process quality. Be able to use math in a Python application. | | | | |
| Details on examination formats | Your final grade will be the average of a (group) product grade and an individual (process) grade. | | | | |
| Instructional formats and education activities | Workshops, project and tutor meetings. | | | | |
| Contact hours for instructional formats and education activities | 32 | Lectures and group (progress) meetings | | | |
| Compulsory attendance | Yes | Assessment is partly based on active participation in the project and during the project meetings. In case of insufficient participation the project can be resit in the next academic year. | | | |
| Aids permitted | All available relevant sources | | | | |

Logic - 3714IT124Z/3715EX023Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|--|--|-------------------------------|---------------------|----------------------------------|-----------------------|
| 1 | Term 2 | Mathematics | | No | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Logic, 3714IT124A /3715EX023Z | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | <p>Logic is the fundamental part of Mathematics. Logic helps Information Technology as well.</p> <p>This course introduces the topics Logic and Sets. After that it will be applied for the program design and proven program correctness. Other applications of Logic and Sets in IT will be mentioned too.</p> | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Design, Realize | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | Logic, Sets, and, design and proven program correctness | | | | |
| Details on examination formats | Written Exam | | | | |
| Instructional formats and education activities | Class hours will be on average 1/3 theory presentation + 2/3 solution explanation of homework exercises | | | | |
| Contact hours for instructional formats and education activities | 31 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | None | | | | |

Term 3

Routing and Switching Essentials (CCNA 2) - 3713IT132Z/3715EX026Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|---|--|-------------------------------|---------------------|----------------------------------|-----------------------|
| 1 | Term 4 | Networking | | No | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Routing and Switching Essentials (CCNA 2), 3713IT132A /3715EX001A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | Routing and Switching Essentials: Describes the architecture, components, and operations of routers and switches in a small network. Students learn how to configure a router and a switch for basic functionality. By the end of this course, students will be able to configure and troubleshoot routers and switches and resolve common issues with RIPv1, RIPv2, single-area and multi-area OSPF, virtual LANs, and inter-VLAN routing in both IPv4 and IPv6 networks. | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Analyze, Design, Realize | | | | |
| Condition(s) for Participation | CCNA 1 Introduction to Networks Skills exam is only open for students which has passed the theory exam | | | | |
| Other details | None. | | | | |
| Examination criteria | Understand and describe basic switching concepts and the operation of Cisco switches Understand and describe the purpose, nature, and operations of a router, routing tables, and the route lookup process Understand and describe how VLANs create logically separate networks and how routing occurs between them Understand and describe dynamic routing protocols, distance vector routing protocols, and link-state routing protocols Configure and troubleshoot static routing and default routing (RIP and RIPng) Configure and troubleshoot an Open Shortest Path First (OSPF) network Understand, configure, and troubleshoot access control lists (ACLs) for IPv4 and IPv6 networks Understand, configure, and troubleshoot Dynamic Host Configuration Protocol (DHCP) for IPv4 and IPv6 networks Understand, configure, and troubleshoot Network Address Translation (NAT) operations | | | | |
| Details on examination formats | On-line theory test, group based practical test | | | | |
| Instructional formats and education activities | Instructor-led theory sessions and hands-on exercises in the lab | | | | |
| Contact hours for instructional formats and education activities | 31 | | | | |

| | | |
|-----------------------|-----|--|

Research 1 - 3713IT131Z/3715ERAS1Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|------------------------------------|----------------|---|---------------------|----------------------------------|-----------------------|
| 1 | Term 3 | Research | | No | 2 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Research 1, 3713IT131A /3715ERAS1A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | | <p>In any but the most simple situations, you need to think before you can create something. It may not always be clear what the problem is, it may not be clear what the solution is. But it can run deeper; there may be alternatives to be considered.</p> <p>A great risk when faced with a question is that the solution seems to be easy, leading the engineer to implement it without considering all aspects of the situation. This may lead to a solution which is unmaintainable, does not give</p> | | | |

| | | | | |
|--|--|--|--|--|
| | <p>the best way to solve the problem, turns out to be the wrong answer, or is ethically unacceptable.</p> <p>During this introductory course in applied research, you will learn a structured way to solve a problem. You will also start the road to a scientific way of reasoning in solving practical problems, and build some understanding of the ethical aspects which may be involved.</p> | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | |
| Competencies | Research and professionalize | | | |
| Condition(s) for Participation | None. | | | |
| Other details | None. | | | |
| Examination criteria | <p>After successfully completing this module, the student is able to:</p> <ul style="list-style-type: none"> - Describe and identify the phases in a structured applied research - Create a summarized plan for each phase in a given, structured research situation - Identify the kind of scientific reasoning needed or neglected in a given situation - Assess the ethical implications in a research proposal and give your reasoned opinion on it. | | | |
| Details on examination formats | <p>The module will be examined with a written, partly case-based exam. The case(s) used on the exam will be made available on blackboard one week before the exam date, so students can prepare themselves. On the exam, question will be asked pertaining to the case(s), as well as more theoretical questions.</p> | | | |
| Instructional formats and education activities | <p>There will be one class a week. During this, the teacher introduces the theme of that week and illustrates it by showing selections from literature, but also from other sources.</p> <p>A subject like this is best learned by discussing it. Much time will be spent discussing the subjects, looking into both good and bad examples etc.</p> | | | |
| Contact hours for instructional formats and education activities | 17 | | | |
| Compulsory attendance | No | | | |
| Aids permitted | None | | | |

DBMS 1 - 3714IT134Z/3715EX008Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|-------------------------------|----------------|--|---------------------|----------------------------------|-----------------------|
| 1 | Term 3 | Data | | No | 4 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| DBMS 1, 3714IT134A/3715EX008A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | | <p>Data are facts, in themselves and without context without meaning. Combining them gives information, facts in context conveying meaning. Nowadays, information is the lifeblood of most if not all organizations. Databases are widely used to organize and store structured data and retrieve information.</p> | | | |

| | | |
|--|---|--|
| | <p>Analyzing this data and converting it to information is an important part of the skillset of a mathematical engineer, who will often use his mathematical and IT skills to supply the organization with the insights necessary to act on circumstances.</p> <p>This course treats the fundamentals of databases and database management systems. In addition, the student learns to manipulate and query databases using the database query language SQL and how to access the database from a programming language. The skills gained will be used in many other courses and projects afterwards.</p> | |
| Stage in the Bachelor programme | Suitable for the profession | |
| Competencies | Design, Realize and Advise | |
| Condition(s) for Participation | None | |
| Other details | None | |
| Examination criteria | <p>After successfully completing this module, the student is able to:</p> <ul style="list-style-type: none"> - Explain the role of databases in information systems - Explain the architecture used in relational database management systems - Write statements for querying and manipulating databases - Connect the database to Java or PHP and access the data from there | |
| Details on examination formats | <p>The exam consists of a written, more theoretical part, and a practical part done on the computer. The written part tests the students' understanding of goals and architecture of a database management system, whereas the computer part tests the ability to manipulate the database and extract information from it.</p> | |

| Compulsory attendance | No | | | | |
| Aids permitted | None | | | | |

English 2 - 3713IT144Z/3715EX009Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|------------------------------------|--|-------------------------------|---------------------|----------------------------------|-----------------------|
| 1 | Term 3 | Professionalization | | No | 2 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| English 2, 3713IT144A //3715EX001A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | <p>Most students enrolling in this course can be both from the Netherlands and abroad and in general will have a good command of the English language in order to be able to follow the courses of IT which are all taught in the English language.</p> <p>Nevertheless, English is an important language in the field of technology, especially information technology. Communication forms an even importance as IT staff needs to communicate with fellow staff and clients in the IT who are far from being an expert in computer science.</p> <p>During all five courses the emphasis will be on reading, writing, listening, speaking and communicating. The courses start with an emphasis on rehearsing the basics in grammar and will subsequently focus on speaking and writing. Especially writing will be the focus of attention and be presented in the form of letters, memos and reports in order to prepare the student not only for the final thesis, but also for the professional work field.</p> <p>The courses aim at for level C1 but preferably C2 of the CEFR.</p> | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Consultancy & Professionalize. | | | | |
| Condition(s) for Participation | None. | | | | |
| Other details | <p>Prerequisites: none, except that the level of English should at least be on B1, but preferably B2, of the CEFR (Common European Framework for References of Languages).</p> <p>Having completed ENG1 is preferred. Students are expected to have full knowledge of all aspects shared in these courses.</p> | | | | |
| Examination criteria | <p><u>GRAMMAR & WRITING EXAM</u></p> <p>Further details about assessment:</p> <p>The exam consists of 60 questions based upon grammar, either by ticking the correct answer, or completing a field, counting for 60% of the grade.</p> <p>Furthermore a written assignment counting for 40%. Both assignments need to be above 55% of their applicable individual score.</p> <p>Assessment criteria</p> <p>Grammar questions in exam: Students pass at least 33 of the 60 questions of the grammar test (max 60 pts);</p> <p>Written assignment in exam: Students pass at least for a minimum of 22 points for the written test in the exam, based upon the following criteria (max. 40 pts):</p> <ul style="list-style-type: none"> - Style (max. 8 pts) - Conventions of a memo (max. 8 pts) - Grammar (max. 8 pts) | | | | |

| | | |
|--|--|--|
| | <ul style="list-style-type: none"> - Use of language, such as complete and full sentences, academic vocabulary (max. 8 pts) - Overall impression, including noticing pitfalls and providing extra details (max. 8 pts). <p><u>PRESENTATION</u></p> <p>The assignment consists of a group presentation on a designated topic, lasting 15 – 20 minutes including feedback and questions from class, in which each student speaks at least for 3 minutes, hence covering an equally divided balance between students in participation. The result needs to be above 55% of the applicable individual score.</p> <p>Assessment criteria</p> <p>The presentation is assessed on the following criteria:</p> <ul style="list-style-type: none"> - Used aids in media, such as PowerPoint, Prezi, Rocket Slide etc, attractiveness of the presentation (max. 5 pts) - Topic, complexness or execution of the assignment (max. 25 pts) - Pronunciation (max. 20 pts) - Structured presentation: head, body, tail, conclusion, including introduction of members, table of contents, attitude in front of class, meeting conventions for presentations (max. 25 pts) - Interaction with class during questions (max. 25 pts) <p>Students attending the presentation are required to ask questions, have a participating attitude and a keen eye for facts versus opinions.</p> | |
| Details on examination formats | Exam and in-term presentation | |
| Instructional formats and education activities | The instructional format and educational activities consist of 7 x 4 classes in the form of workshops and lectures in which a proactive, participating attitude is expected; an in-term group presentation which forms part of the final grade, followed by an individual exam. | |
| Contact hours for instructional formats and education activities | 31 | |
| Compulsory attendance | No | |
| Aids permitted | Reading requirements as indicated, dictionary. Exam: none. Presentation: to be decided by student(s). | |

Term 4

Object Oriented Programming 1 - 3714IT133Z/3715EX007Z

| Study Year | Education Period | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|--|--|-------------------------------|---------------------|----------------------------------|-----------------------|
| 1 | Period 3 | Software Engineering | | No | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Object Oriented Programming 1, 3714IT133A /3715EX007A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | In the first semester, students learned the basics of programming structures. These basics are sufficient for small applications handling small amounts of data. Serious applications handling large amounts of data with complicated algorithms are developed with more powerful tools and techniques however. During this course, a start will be made with one of the most powerful tools available for developing this kind of programs: object orientation. In object orientation, the problem at hand is divided into smaller 'objects' with a certain degree of independency. There is no main program; instead the objects will cooperate to achieve the goal. | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Design and realise | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | After successfully completing this module, the student is able to: Apply Java constructs in creating a basic application Use both basic and advanced OO concepts in developing desktop software Design classes according to industry-standard guidelines | | | | |
| Details on examination formats | This module will be examined by a practical exam. In this exam, students will program one or more (small) applications containing most of the techniques learned. | | | | |
| Instructional formats and education activities | Class will start with a presentation on the subjects of that day. After that, the teacher will write a short demonstration application, using the ideas and input from the students attending. The idea here is to show the way of thinking used in object orientation, so this part of the lesson will have little preparation from the teacher, relying on ideas from the students! After the ideas have been demonstrated, students will work on assignments given, finishing them between classes. | | | | |
| Contact hours for instructional formats and education activities | 45 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | During the exam, it is allowed to use the Java API (online) and Java books (such as the course book) without notes, either hardcopy or as a pdf. Other sources (for example StackOverflow) are not allowed. | | | | |

Project Databases - 3713IT141Z/3715EX012Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|---|--|-------------------------------|---------------------|----------------------------------|-----------------------|
| 1 | Term 4 | Data | | No | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Project Databases, 3713IT141A /3715EX012A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | <p>The second project of year 1 integrates many of the courses previously (and during this term) taught, and adds the element of a real client to it. It focuses on the use of research techniques to solve a real-world problem. As the courses of terms 3 and 4 have been focusing on database technology, whereas terms 1 and 2 involved web programming, the project combines those two aspects and asks the student to create a web application with a database.</p> <p>The goal of this project is to provide the client with an application which will allow the faculty to offer negotiated study units, students to enroll in them, with the application supporting the desired workflow.</p> | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Analyze, Design, Realise, Maintain, Manage, Advise, Professionalize and Research | | | | |
| Condition(s) for Participation | None, but students are expected to have knowledge and skills of databases equivalent to <i>DBMS 2, 3714IT143A</i> (or follow this course) and web-programming skills equivalent to <i>Web Programming 2, 3714IT122A</i> . | | | | |
| Other details | None. | | | | |
| Examination criteria | <p>After successfully finishing this project, the student can:</p> <ul style="list-style-type: none"> - Create and work with a project plan, using a prestructured research and development structure - Analyse the needs of the client and translate the results of this analysis to a web-based application - Design this web application using prescribed methods and technologies - Implement the design including the database, using prescribed methods and techniques - Use a version control system to coordinate the work within the team - Create and maintain basic functional and technical documentation for the application <p>Besides these specific criteria, students will be assessed on general project skills (Advise, Professionalize and Research)</p> | | | | |
| Details on examination formats | <p>Students are assessed on the quality of the product, the quality of the report and the quality of their project work. All three aspects should be a Pass mark. Furthermore, they are assessed on their individual contribution to the final results; this also has to be a pass.</p> <p>If students fail either the product or the presentation, they can redo this a week later. Failing the process or individual contribution cannot be repaired during a resit; the whole project will have to be redone.</p> | | | | |

| | | |
|--|---|--|
| Instructional formats and education activities | Developing a (web-based) application for a 'real' client. | |
| Contact hours for instructional formats and education activities | 32 | |
| Compulsory attendance | Yes | Assessment is partly based on active participation in the project and during the project meetings. In case of insufficient participation the project can be resit in the next academic year. |
| Aids permitted | All | |

DBMS 2 - 3714IT143Z/3715EX011Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|--|---|-------------------------------|---------------------|----------------------------------|-----------------------|
| 1 | Term 4 | Data | | No | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| DBMS 2, 3714IT143A /3715EX011Z | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | Data are facts, in themselves and without context without meaning. Combining them gives information, facts in context conveying meaning. Nowadays, information is the lifeblood of most if not all organizations. Databases are widely used to organize and store structured data and retrieve information. In the course DBMS1, students learned how to manipulate the data stored in a database and how to handle it to get information. The other side of using a database management system is the ability to design, implement and optimize a database. The scope in this is quite broad; as a mathematical engineer, your focus will be on developing and optimizing the physical implementation rather than analyzing the data to be stored in the database. That does not mean you do not have to learn how to do a basic information analysis, however, in practice, the more complex data structures will be analyzed by a specialist, the results to be used by the engineer in designing the actual database. In this course, students will learn how to convert the results of an information analysis into the necessary logical and physical models, implement these in a database, and optimize this database for the expected usage. Part of this is writing triggers and stored procedures to support the retrieval of complex information and to keep the database consistent. | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Design and Realize | | | | |
| Condition(s) for Participation | None, but students are expected to have knowledge and skills of databases equivalent to <i>DBMS 1 - 3714IT134Z</i> | | | | |
| Other details | None | | | | |
| Examination criteria | After successfully completing this module, the student is able to: <ul style="list-style-type: none">- Create a simple database model given a clear context and information need- Transform the results of this information analysis to a database design- Optimize the database design in terms of consistency and performance- Implement the database design in the MySQL DBMS- Write MySQL triggers and stored procedures to support the usage of the database | | | | |
| Details on examination formats | The exam consists of a written part on database design, and a practical part done on the computer. | | | | |
| Instructional formats and education activities | Instructions and lab sessions. | | | | |
| Contact hours for instructional formats and education activities | 31 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | A computer running MySQL | | | | |

Statistics 1 - 3714IT145Z/3715ERAS8Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|--|---|-------------------------------|---------------------|----------------------------------|-----------------------|
| 1 | Term 4 | Mathematics | | No | 2 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Statistics 1, 3714IT145A /3715ERAS8A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | <p>We use data all the time, varying from comparing grocery prices to figuring out who's going to win the next elections. When we have all data, analyzing it might still not be easy, but at least it's clear how to proceed. But often we do not have all data; it's infeasible to gather all prices from all supermarkets, so how to decide the cheapest one? Or it's just plain impossible to gather all data; we just cannot ask all people in the USA who they are going to vote for next month.</p> <p>Whenever we have a lot of (often incomplete) data and need to draw conclusions, we use statistics. That means statistics are everywhere; economics (what is the current inflation?), politics (opinion polling), networking (error analysis), software development (test coverage.) The list goes on. Not only is knowledge of statistics useful for the engineer because of its usage in analyzing the technical systems he's working on, statistics forms the foundation of many big data techniques.</p> <p>Last but not least: statistics are quite often used to mask the truth. We call that 'lying with statistics'. It is very useful, and often quite fun, to see through those attempts at manipulating your behavior in a direction you might not want to.</p> | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Analyze and Realize | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | <p>After successfully completing this module, the student is able to:</p> <ul style="list-style-type: none"> - Explain the basic goals and concepts of statistics - Describe a data set in statistical terms - Draw a graphical representation of a data set - Work with probability theory to describe simple and compound chances - Apply elements of probability theory to descriptive statistics | | | | |
| Details on examination formats | Written Exam | | | | |
| Instructional formats and education activities | <p>Class consists of a mixture of explaining the fundamentals and doing exercises. Between classes, assignments are given to practice. Answers can be compared to the answers given in the text book. At the beginning of the next class, questions about the assignments can also be asked.</p> <p>Special attention will be given to the misuse and abuse of (descriptive) statistics; not because it's more important, but because it is a good way to gain insight in what statistical analysis actually means. The last class is different from the others. While analysing small amounts of data can be done manually, doing so for large data sets would become prohibitively time-consuming and</p> | | | | |

| | | |
|--|---|--|
| | error-prone. Analyses are usually done using statistical software packages such as SPSS and R. During the last class, all previous materials will be rehearsed using SPSS, thereby both reinforcing understanding of the principles and learning how to use SPSS itself. Usage of SPSS is not part of the exam however. | |
| Contact hours for instructional formats and education activities | 24 | |
| Compulsory attendance | No | |
| Aids permitted | On this exam, apart from pens, pencils etc, only the materials provided as part of the exam are allowed. A basic hand calculator will be provided; bringing your own calculator is not allowed. | |

Linear Algebra - 3714IT146Z

| Study Year | Education Term | Name of Examination Component | | Qualitative requirement BSR norm | Study Load in Credits |
|--|--|-------------------------------|---------------------|----------------------------------|-----------------------|
| 1 | Term 4 | Mathematics | | No | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Linear Algebra, 3714IT146A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | Linear Algebra helps you to understand more dimensions. Solving linear equations and mappings can be done by the theory of Linear Algebra. This class will introduce Vectors and Matrices. Basic topics are: Determinants, Inverse, and Eigenvalue. Matlab will be the software tool for calculation help. | | | | |
| Stage in the Bachelor programme | Suitable for the profession | | | | |
| Competencies | Analyze and Realize | | | | |
| Condition(s) for Participation | None | | | | |

Year 2

Term 1

Scaling Networks (CCNA 3) - 3713IT211Z/3715EX015A

| Study Year | Education Term | Name of Examination Component | | | Study Load in Credits |
|--|---|-------------------------------|---------------------|-------------------|-----------------------|
| 2 | Term 1 | Networking | | | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Scaling Networks (CCNA 3), 3713IT211A/3715EX015A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | Describes the architecture, components, and operations of routers and switches in a large and complex network. Students learn how to configure routers and switches for advanced functionality. By the end of this course, students will be able to configure and troubleshoot routers and switches and resolve common issues with OSPF, EIGRP, STP, and VTP in both IPv4 and IPv6 networks. Students will also develop the knowledge and skills needed to implement DHCP and DNS operations in a network. | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyze, Design, Realize, Maintain | | | | |
| Condition(s) for Participation | CCNA1 Introduction to Networks CCNA2 Routing and Switching Essentials Skills exam is only open for students which has passed the theory exam | | | | |
| Other details | None | | | | |
| Examination criteria | Understand, configure and troubleshoot enhanced switching technologies such as VLANs, Rapid Spanning Tree Protocol (RSTP), Per VLAN Spanning Tree Plus Protocol (PVST+), and EtherChannel Understand, configure, and troubleshoot first hop redundancy protocols (HSRP) in a switched network Understand, configure, and troubleshoot wireless routers and wireless clients Configure and troubleshoot routers in a complex routed IPv4 or IPv6 network using single-area OSPF, multiarea OSPF, and Enhanced Interior Gateway Routing Protocol (EIGRP) Manage Cisco IOS® Software licensing and configuration files | | | | |
| Details on examination formats | On-line theory test, group based practical test | | | | |
| Instructional formats and education activities | Instructor-led theory sessions and hands-on exercises in the lab | | | | |
| Contact hours for instructional formats and education activities | 31 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | N/A | | | | |

English 3 - 3713IT212Z/3715EX016A

| Study Year | Education Term | Name of Examination Component | | | Study Load in Credits |
|-----------------------------------|--|-------------------------------|---------------------|-------------------|-----------------------|
| 2 | Term 1 | Professionalization | | | 2 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| English 3, 3713IT212A /3715EX016A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | <p>Most students enrolling in this course can be both from the Netherlands and abroad and in general will have a good command of the English language in order to be able to follow the courses of IT which are all taught in the English language.</p> <p>Nevertheless, English is an important language in the field of technology, especially information technology. Communication forms an even importance as IT staff needs to communicate with fellow staff and clients in the IT who are far from being an expert in computer science.</p> <p>During all five courses the emphasis will be on reading, writing, listening, speaking and communicating. The courses start with an emphasis on rehearsing the basics in grammar and will subsequently focus on speaking and writing. Especially writing will be the focus of attention and be presented in the form of letters, memos and reports in order to prepare the student not only for the final thesis, but also for the professional work field.</p> <p>The courses aim at for level C1 but preferably C2 of the CEFR.</p> | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Consultancy, Professionalize | | | | |
| Condition(s) for Participation | <p>None.</p> <p>However, the student is expected to be familiar with the contents provided in ENG1 and ENG2.</p> | | | | |
| Other details | <p>Prerequisites: none, except that the level of English should at least be on B1, but preferably B2, of the CEFR (Common European Framework for References of Languages).</p> <p>Having completed ENG1 and ENG2 is preferred. Students are expected to have full knowledge of all aspects shared in these courses.</p> | | | | |
| Examination criteria | <p><u>GRAMMAR & WRITING EXAM</u></p> <p>Further details about assessment:</p> <p>The exam consists of two writing assignments and subsequent questions, (1) assignment on summarizing an article and (2) assignment on writing letters to a prosperous client. The exam needs to be above 55% of the applicable individual score.</p> <p>Assessment criteria</p> <p>Summary:</p> <p>Summarizing the article within the given number of words</p> <p>Answering the questions on the article</p> <p>Summarizing the article by selecting the essential information, which should not be copy-pasted but written in own words.</p> | | | | |

| | |
|--|--|
| | <p>Use of language, such as complete and full sentences, academic vocabulary</p> <p>Meeting grammar and style conventions.</p> <p>Letters:</p> <p>Answering the questions on the article</p> <p>Meeting conventions of a letter; addressee, references etc</p> <p>Tone of language towards client</p> <p>Suggested solution to the posed problem</p> <p>Use of language, such as complete and full sentences, academic vocabulary</p> <p><u>PORTFOLIO</u></p> <p>The assignment consists of 4 assignments, to be discussed during the lectures and to be completed at home, according to the conventions of writing indicators.</p> <p>Assessment criteria</p> <p>Summary:</p> <p>Summarizing the article within the given number of words</p> <p>Answering the questions on the article</p> <p>Summarizing the article by selecting the essential information, which should not be copy-pasted but written in own words.</p> <p>Use of language, such as complete and full sentences, academic vocabulary</p> <p>Meeting grammar and style conventions.</p> <p>Letters:</p> <p>Answering the questions on the article</p> <p>Meeting conventions of a letter; addressee, references etc</p> <p>Tone of language towards client</p> <p>Suggested solution to the posed problem</p> <p>Use of language, such as complete and full sentences, academic vocabulary</p> <p><u>PRESENTATION</u></p> <p>The assignment consists of a group presentation on a designated topic, lasting 15 – 20 minutes including feedback and questions from class, in which each students speaks at least for 3 minutes, hence covering an equally divided balance between students in participation.</p> <p>Assessment criteria</p> <p>The presentation is assessed on the following criteria:</p> <p>Used aids in media, such as PowerPoint, Prezi, Rocket Slide etc, attractiveness of the presentation (max. 5 pts)</p> <p>Topic, complexness or execution of the assignment (max. 25 pts)</p> <p>Pronunciation (max. 20 pts)</p> <p>Structured presentation: head, body, tail, conclusion, including introduction of members, table of contents, attitude in from of class, meeting conventions for presentations (max. 25 pts)</p> <p>Interaction with class during questions (max. 25 pts)</p> <p>Students attending the presentation are required to ask questions, have a participating attitude and a keen eye for facts versus opinions.</p> |
| | <p>Details on examination formats</p> <p>Exam, portfolio, in-term presentation</p> |

| | | |
|--|--|--|
| Instructional formats and education activities | The instructional format and educational activities consist of 7 x 4 classes in the form of workshops and lectures in which an proactive, participating attitude is expected; an in-term group presentation which forms part of the final grade, followed by an individual exam and portfolio. | |
| Contact hours for instructional formats and education activities | 31 | |
| Compulsory attendance | No | |
| Aids permitted | Reading requirements as indicated, dictionary. Exam: none. Presentation: to be decided by student(s). Portfolio: to be decided by student(s). | |

Object Oriented Programming 2 - 3713IT213Z/3715EX017Z

| Study Year | Education Term | Name of Examination Component | | | Study Load in Credits |
|---|----------------|---|---------------------|-------------------|-----------------------|
| 2 | Term 1 | Software Engineering | | | 5 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Object Oriented Programming 2, 3713IT213A /3715EX017A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | | <p>In the first year, students learned the basics of programming structures. These basics are sufficient for small applications handling small amounts of data. Serious applications handling large amounts of data with complicated algorithms are developed with more powerful tools and techniques however.</p> <p>Object Oriented Programming 1 started with the concepts of object orientation and its design and implementation using Java. After finishing that course, students were expected to be able to use Java correctly, including the basics principles behind object orientation.</p> <p>During this course, we will expand on the knowledge from OOP1 and introduce some advanced features of Java, thereby gaining a deeper understanding of the concepts behind object orientation. Fundamental in this are several design patterns. Also covered are reflection, networking and streams. The final part of the course is an introduction to building graphical interfaces using JavaFX.</p> <p>After successfully finishing this module, the student will be able to create a fully functional server application.</p> | | | |
| Stage in the Bachelor programme | | In possession of the skills necessary for professionalisation | | | |
| Competencies | | Design and Realise | | | |
| Condition(s) for Participation | | None, but students are expected to have the knowledge and skills of <i>Object Oriented Programming 1, 3714IT133A</i> | | | |
| Other details | | None | | | |
| Examination criteria | | <p>After successfully completing this module, the student is able to:</p> <p>Design an application in a way fitting with the purpose and environment of it</p> <p>Make use of design patterns to create flexibility in the implementation of the algorithms used</p> <p>Make full use of multithreading, including but not limited to synchronization and interthread communication</p> <p>Use the Collections framework and Generics</p> <p>Create a functional GUI with JavaFX</p> | | | |
| Details on examination formats | | <p>During the last class, students will be a set of functional specifications. They will, individually, create the application using the given classes and specifications. Grading will be done by checking whether all techniques learned were used correctly to solve the problem set.</p> <p>When failing the assignment, the student will receive feedback. After that, he can hand in an improved version during the resit Term.</p> | | | |
| Instructional formats and education activities | | Class will start with a presentation on the subjects of that day. After that, the teacher will write a short demonstration application, using the ideas | | | |

| | | |
|--|--|--|
| | and input from the students attending. The idea here is to show the way of thinking used in object orientation, so this part of the lesson will have little preparation from the teacher, relying on ideas from the students! After the ideas have been demonstrated, students will work on assignments given, finishing them between classes. | |
| Contact hours for instructional formats and education activities | 45 | |
| Compulsory attendance | No | |
| Aids permitted | The student may use any means, provided that they make their own assesment and the student must be clear in their source | |

Probability Theory - 3713IT232Z/3715EX018Z

| Study Year | Education Term | Name of Examination Component | | | Study Load in Credits |
|--|---|-------------------------------|---------------------|-------------------|-----------------------|
| 2 | Term 1 | Mathematics | | | 5 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Probability Theory, 3713IT232A /3715EX018A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | Probability Theory is the fundament for many applied Mathematical topics like Statistics and Operations Research. In this class the definition of Probability will be based on uncertainty in the real world. So Probability Theory is related to the real world too. Further the class will cover all calculation details about probability. An introduction to Markov chains (a special Stochastic Process, which we meet in our daily life) will be the interesting end of this class. | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyze,Realize | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | Probability theory | | | | |
| Details on examination formats | Written Exam | | | | |
| Instructional formats and education activities | Lectures | | | | |
| Contact hours for instructional formats and education activities | 31 | | | | |
| Compulsory attendance | No | | | | |

Term 2

Project Application Development - 3713IT221Z/3715EX019Z

| Study Year | Education Term | Name of Examination Component | | | Study Load in Credits |
|--|----------------|--|---------------------|-------------------|-----------------------|
| 2 | Term 2 | Software Engineering | | | 5 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Project Application Development, 3713IT221A/3715EX019A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | | <p>An important application of mathematical engineering is building a model of a real-life situation in order to make predictions and find desirable solutions to a problem. In this, two major approaches can be distinguished.</p> <p>In one, a full mathematical model is developed. This model the is used to make predictions. Usually, when the situation modelled is complex or extensive, the model is transformed into a computer application and this application is used to do the predictions. We call this the mathematical solution, although creating an application to do the calculations is still involved.</p> <p>The second major approach is to create an application simulating the real-life situation, and build the behaviour into this model. This involves less advanced mathematical modelling than the first option, but creating and running the application is more difficult. We call this the simulation solution, although you still need a significant amount of mathematics to understand and implement the behaviour.</p> <p>The question which of those two options is best cannot generally be answered, as it depends on the specific circumstances. In this project, one of those real-life situations will be examined from both angles, as to gain some understanding of the way this kind of problems can be tackled.</p> <p>In this project, you will work in a project group of about five students on one the two mentioned approaches. Another project group will work on the same case study, but use the other angle to solve it. near the end, the two groups compare their results and draw a conclusion on the pros and cons of both angles and decide what would be the best way to make predictions on the subject given.</p> | | | |
| Stage in the Bachelor programme | | In possession of the skills necessary for professionalisation | | | |
| Competencies | | Analyze, Design, Realise, Maintain, Manage, Advise, Professionalize and Research | | | |
| Condition(s) for Participation | | None, but students are expected to have the knowledge and skills of <i>Object Oriented Programming 2, 3713IT213A</i> | | | |
| Other details | | None | | | |
| Examination criteria | | <p>After successfully finishing this project, the student can:</p> <p>Use a version control system to coordinate the work within the team</p> <p>Choose a software development method suitable to the situation at hand</p> <p>Analyse the math involved in problems of ecology</p> <p>Transform the math to either a simulation or an algorithm</p> | | | |

| | | |
|--|--|--|
| | Implement the design made in the previous step in software Create and maintain technical documentation for the application Besides these specific criteria, students will be assessed on general project skills (Advise, Professionalize and Research) | |
| Details on examination formats | Developing a computer application | |
| Instructional formats and education activities | Developing a computer application | |
| Contact hours for instructional formats and education activities | 32 | |
| Compulsory attendance | Yes | Assessment is partly based on active participation in the project and during the project meetings. In case of insufficient participation the project can be resit in the next academic year. |
| Aids permitted | The student may use any means, provided that they make their own assessment and the student must be clear in their source | |

Software Engineering - 3712IT233Z/3715EX024Z

| Study Year | Education Term | Name of Examination Component | | | Study Load in Credits |
|--|--|-------------------------------|---------------------|-------------------|-----------------------|
| 2 | Term 2 | Software Engineering | | | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Software Engineering, 3712IT233A /3715EX024A | | Written | No | Grade (10-100) | 100% |
| Content of Unit of Study | <p>Very small information systems can be developed on the fly; usually the client is clear, might even be the same as the developer, and the requirements can be easily understood. It already becomes more complicated if the algorithms involved are non-trivial, and when system grows larger and needs to be maintainable as well, the ‘code as you go’ approach ceases to produce usable results.</p> <p>Another problem you run into is the need to adapt the information system to changing needs, or expand it to accommodate new requirements. The difference between a programmer and a software engineer is the ability to take al these – often conflicting – requirements and follow a path to the analysis, design and implementation of an information system which stays useful and used over time.</p> <p>This course addresses the systematic (agile) approach to the design and development of (large) IT systems. It will cover classic requirements and design techniques such as OO concepts, type systems, subsystem design and reusable patterns. Besides traditional development methodologies some agile principles such as refactoring, code quality and test driven development will be discussed.</p> | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyse, design, manage, research and professionalize | | | | |
| Condition(s) for Participation | None. | | | | |
| Other details | None. | | | | |
| Examination criteria | <p>After successfully completing this module, the student is able to:</p> <p>Translate the information needs of a client to functional specifications</p> <p>Apply reusable patterns in designing the architecture of a new information system</p> <p>Modify an existing application, keeping the architecture in line with the requirements from the requirements analysis</p> <p>Choose a software development method and modeling technique suitable for the problem at hand</p> <p>Work systematically from vaguely defined information needs to an application able to fulfill those</p> <p>Combine reusable patterns in new ways to accommodate future changes to an application</p> | | | | |
| Details on examination formats | | | | | |
| Instructional formats and education activities | | | | | |
| Contact hours for instructional formats and education activities | 31 | | | | |
| Compulsory attendance | No | | | | |

UML - 3713IT224Z/3715EX006Z

| Study Year | Education Term | Name of Examination Component | | | Study Load in Credits |
|---------------------------------|---|-------------------------------|---------------------|-------------------|-----------------------|
| 2 | Term 2 | Software Engineering | | | 4 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| UML, 3713IT224A /3715EX006A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | <p>Modelling is a central part of the development of applications beyond the trivial. Models are needed for various reasons:</p> <ul style="list-style-type: none"> to communicate the desired structure and behavior of the system with all parties involved; to visualize and control the system's architecture; to better understand the system being build; to expose opportunities for simplification and reuse; to manage risk. <p>The Unified Modeling Language is the major notation for object oriented information systems. Students will learn the principles of UML and learn to understand the link between software design and code.</p> <p>Students will learn to gather relevant information to create and understand UML diagrams and use case descriptions for requirement elicitation, design and documentation of an application.</p> | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyze, design and realize | | | | |
| Condition(s) for Participation | <p>None, but students following this course are expected to have the knowledge and skills of:</p> <ul style="list-style-type: none"> 3714IT133A – Object Oriented Programming 1 and 3713IT213A – Object Oriented Programming 2 <p>or an equivalent in object oriented programming.</p> | | | | |
| Other details | None | | | | |
| Examination criteria | <p>After successfully completing this course, the student can:</p> <ul style="list-style-type: none"> - create, read and interpret use case diagrams and use case descriptions (i.e. with name, pre- and post-conditions, primary actors, main success scenario and alternative flows, with the user starting and stopping the use case) (1.2.3); - create read and interpret system sequence diagrams (1.2.3); - create read and interpret domain models (conceptual classes) (1.2.3); - create read and interpret class diagrams (software classes) (2.2.3); - create, read and interpret interaction diagrams and can convert a sequence diagram in a collaboration diagram and vice versa (2.2.3); - apply collections, owner (parent child) and descriptive versus sample relations in class diagrams/domain models (2.2.3); - apply the controller, supply, demand, transaction sections in domain models (1.2.3); - apply the GRASP patterns Information expert, Creator, Controller and High Cohesion/Low Coupling (2.2.3); | | | | |

| | | |
|--|--|---|
| | - convert class diagrams and/or communication diagrams to Java-code and vice versa (3.2.1). | |
| Details on examination formats | Written exam | |
| Instructional formats and education activities | <p>The contact hours are in the form of lectures of 2 hours twice a week where the theory but also exercises will be discussed.</p> <p>The students are expected to prepare the lectures by studying the chapters and by making the exercises as indicated in the Student Guide on blackboard.</p> | |
| Contact hours for instructional formats and education activities | 31 | Lectures, self-study and working on assignments |
| Compulsory attendance | No | |
| Aids permitted | N.a | |

Term 3

Connecting Networks (CCNA 4) - 3713IT231Z

| Study Year | Education Term | Name of Examination Component | | | Study Load in Credits |
|--|--|-------------------------------|---------------------|-------------------|-----------------------|
| 2 | Term 3 | Networking | | | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Connecting Networks (CCNA 4), 3713IT231A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | This course discusses the WAN technologies and network services required by converged applications in a complex network. The course enables participants to understand the selection criteria of network devices and WAN technologies to meet network requirements. Participants learn how to configure and troubleshoot network devices and resolve common issues with data link protocols. Participants will also develop the knowledge and skills needed to implement virtual private network (VPN) operations in a complex network. | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyze, Design, Realize, Maintain | | | | |
| Condition(s) for Participation | CCNA1 Introduction to Networks CCNA2 Routing and Switching Essentials CCNA3 Scaling Networks Skills exam is only open for students which has passed the theory exam | | | | |
| Other details | None | | | | |
| Examination criteria | Understand and describe different WAN technologies and their benefits Understand and describe the operations and benefits of virtual private networks (VPNs) and tunneling Understand, configure, and troubleshoot Serial connections Broadband connections Tunneling operations Network Address Translation (NAT) operations Monitor and troubleshoot network operations using syslog, SNMP, and NetFlow Understand and describe network architectures: Borderless networks Data centers and virtualization Collaboration technology and solutions | | | | |
| Details on examination formats | On-line theory test, group based practical test | | | | |
| Instructional formats and education activities | Instructor-led theory sessions and hands-on exercises in the lab | | | | |
| Contact hours for instructional formats and education activities | 31 | | | | |
| Compulsory attendance | No | | | | |

| Graph Theory, 3713IT214A /3715EX025A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | Graph Theory is nowadays a very important Mathematical 'Tool' to understand our society. Information Technology has given Graph Theory the possibility to solve the Coloring problem, and vice versa Graph Theory has given IT a lot more possibilities too, like e.g. Internet. Also Social Networks have benefits of Graph Theory. This class will do the introduction of Graph theory with an emphasis on algorithms. The class will prepare for the applications of Graphs in mathematical related fields like IT and Operations Research. | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyze, Design and Realize | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |

Algorithms & Datastructures 1 - 3713IT234Z/3715EX010Z

| Study Year | Education Term | Name of Examination Component | | | Study Load in Credits |
|--|---|-------------------------------|---------------------|-------------------|-----------------------|
| 2 | Term 3 | Mathematics | | | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Algorithms & Datastructures 1, 3713IT234A /3715EX010A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | <p>This course is about data structures and algorithms as used in computer programming. A data structure is an arrangement of data in the computer's memory (or on a disk). An algorithm describes the procedure a program uses to manipulate the data in this structure in a specific way. Almost all programs use data structures and algorithms. For simple programs with small amounts of data, a straightforward approach might be all you need. However, for programs of a more complex nature or when dealing with large amounts of data, more sophisticated techniques are necessary. In this course various basic algorithms and data structures are explained, such as linked lists, stacks, queues, heaps, binary search trees, and sorting algorithms. The course focuses on the working of the algorithms, the application to various types of problems, and the implementation in Java.</p> | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyze and design | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | <p>The student can:</p> <ul style="list-style-type: none"> explain the role of algorithms and data structures in applications; explain the working of a number of basic algorithms and data structures; explain the strong and weak points of a number of basic algorithms and data structures; compute the computational complexity of algorithms and operations on data structures; implement a number of basic algorithms and data structures; choose appropriate algorithms and data structures for applications using a set of basic algorithms and data structures. | | | | |
| Details on examination formats | The written exam consists of open questions. | | | | |
| Instructional formats and education activities | Classes consist of instructions and programming exercises. | | | | |
| Contact hours for instructional formats and education activities | 31 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | None | | | | |

Research 2 - 3713IT235Z/3715ERAS2Z

| Study Year | Education Term | Name of Examination Component | | | Study Load in Credits |
|--|--|-------------------------------|---------------------|-------------------|-----------------------|
| 2 | Term 3 | Research | | | 2 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Research 2, 3713IT235A /3715ERAS2A | | Written | No | Grade (10-100) | 100% |
| Content of Unit of Study | In the research courses the student develops the soft skills needed for successfully conducting applied research projects during their studies and in their professional life. The focus of this course is on writing and using project plans. | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Research | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | <p>The student can:</p> <ul style="list-style-type: none"> analyze a simple real world problem and transform it into a research problem; formulate a main research questions for a research problem; split a main research question into a set of subquestion; select a research methodology to answer a subquestion; create a planning for a research project; identify risks in a methodology and describe possible solutions; write a research plan; conduct a small-scale study according to a research plan; reflect on the strengths and weaknesses of a research plan; | | | | |
| Details on examination formats | The grade will be based on two assignments, one individual and one a group assignment. | | | | |
| Instructional formats and education activities | Instructions and working on group assignments and individual assignments. | | | | |
| Contact hours for instructional formats and education activities | 17 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | All | | | | |

Term 4

Project Web Science - 3713IT241Z

| Study Year | Education Term | Name of Examination Component | | | Study Load in Credits |
|---------------------------------|----------------|---|---------------------|-------------------|-----------------------|
| 2 | Term 4 | Mathematics | | | 5 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Project Web Science, 3713IT241A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | | <p>The World Wide Web is without doubt the single most important source of information that has ever been available. At the same time it is also the least controlled and understood source. How is all this information structured? Who are its users? How is it used? Web Science aims to answer these questions by studying the techniques, users, and structure of the web.</p> <p>Web science is practiced out of pure curiosity as well as for gaining strategic advantage. For example, companies monitor their online presence by analyzing Twitter conversations in which they are mentioned. Search engines analyze link structure to identify authoritative web sites. News agencies crawl blogs and social media to get real-time information about unexpected events.</p> <p>In this project students will research part of the web by application of various web science methods. The theoretical foundation of these methods were laid in the courses on Graph Theory and Algorithms and Data Structures. For the practical application software development skills are needed as covered in the courses ULM, Software Development, and Object Oriented Programming. Finally, this course requires the skills developed in the Research courses.</p> | | | |
| Stage in the Bachelor programme | | In possession of the skills necessary for professionalisation | | | |
| Competencies | | Analyze, Design, Realize, Manage, Research, Professionalize | | | |
| Condition(s) for Participation | | None, but student are expected to have knowledge of Graph Theory equivalent to <i>Graph Theory - 3713IT214Z</i> | | | |
| Other details | | None | | | |
| Examination criteria | | <p>The student is able to:</p> <ul style="list-style-type: none"> translate a question of a client into a web science problem; identify ethical aspects of a web science project; model (part of) the world wide web as a graph; select appropriate data structures and algorithms for a web science problem; select graph theoretical concepts appropriate for solving a web science question; create an efficient implementation of graph theoretical concepts; analyze graphs that are too large to be visualized in full; evaluate the consequences of graph theoretical properties for real world graphs; work according to a project plan; perform managing tasks within a project group; | | | |

| | | |
|--|--|--|
| | communicate effectively and efficiently with all parties involved; divide work within a project team; effectively collaborate in a project team; write a well-structured report about a project; find relevant literature and use the literature during a project; critically reflect on the effectiveness of the chosen methods. | |
| Details on examination formats | The grade will be based on the quality of the analysis, the report, and the individual performance of the student. | |
| Instructional formats and education activities | Instructions and group work. | |
| Contact hours for instructional formats and education activities | 32 | |
| Compulsory attendance | Yes | Assessment is partly based on active participation in the project and during the project meetings. In case of insufficient participation the project can be resit in the next academic year. |
| Aids permitted | None | |

Numerical Analysis - 3713IT243Z/3715EX027Z

| Study Year | Education Term | Name of Examination Component | | | Study Load in Credits |
|--|---|-------------------------------|---------------------|-------------------|-----------------------|
| 2 | Term 4 | Mathematics | | | 4 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Numerical Analysis, 3713IT243A/3715EX027A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | This Class helps the student to understand what numerical algorithms will do. The topics are Errors, Approximations, Interpolations, Numerical Integration and Linear Equations. The mathematical theory behind these topics will be studied, so that good Algorithms can be found. | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyze, Design and Realize | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | Errors, Approximations, Interpolations, Numerical Algorithms and Linear Equations | | | | |
| Details on examination formats | Written Exam | | | | |
| Instructional formats and education activities | Lectures, Labs | | | | |
| Contact hours for instructional formats and education activities | 31 | | | | |
| Compulsory attendance | No | | | | |

| Compulsory attendance | No | |
| Aids permitted | None | |

English 5 - 3713IT246Z/3715EX014Z

| Study Year | Education Term | Name of Examination Component | | | Study Load in Credits |
|-----------------------------------|--|-------------------------------|---------------------|-------------------|-----------------------|
| 2 | Term 4 | Professionalization | | | 2 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| English 5, 3713IT246A /3715EX014A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | <p>Most students enrolling in this course can be both from the Netherlands and abroad and in general will have a good command of the English language in order to be able to follow the courses of IT which are all taught in the English language.</p> <p>Nevertheless, English is an important language in the field of technology, especially information technology. Communication forms an even importance as IT staff needs to communicate with fellow staff and clients in the IT who are far from being an expert in computer science.</p> <p>During all five courses the emphasis will be on reading, writing, listening, speaking and communicating. The courses start with an emphasis on rehearsing the basics in grammar and will subsequently focus on speaking and writing. Especially writing will be the focus of attention and be presented in the form of letters, memos and reports in order to prepare the student not only for the final thesis, but also for the professional work field.</p> <p>The courses aim at for level C1 but preferably C2 of the CEFR.</p> | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Management, Consultancy & Professionalize. | | | | |
| Condition(s) for Participation | None. | | | | |
| Other details | <p>Prerequisites: none, except that the level of English should at least be on B1, but preferably B2, of the CEFR (Common European Framework for References of Languages).</p> <p>Having completed ENG1, ENG2, ENG3 and ENG4 is preferred. Students are expected to have full knowledge of all aspects shared in these courses.</p> | | | | |
| Examination criteria | <p>DOCUMENTATION ON WEB SCIENCE</p> <p>Further details about assessment:</p> <p>The assignment consist of weekly drafting an agenda and minutes of meeting for Web Science. After feedback sessions, students need to take this into consideration and improve the agenda and minutes. Furthermore, drafts of the report for Web Science are send it around week 3, after which these will receive feedback, which students need to adapt into the report according to the given comments. At the end of the term, 7 agenda's, 7 minutes and a final version of the report will be handed in a group portfolio. The portfolio needs to be above 55% of the applicable group score.</p> <p>Assessment criteria</p> <p>Agenda and minutes</p> <p>Correct agenda, including the conventions of an agenda</p> <p>Proper taking of minutes based upon the agenda</p> <p>Correct use of the English language</p> <p>Proper layout</p> <p>Digitally handed in on a weekly basis</p> <p>Final report</p> <p>Correct use of the English language</p> <p>Proper layout</p> | | | | |

| | | |
|--|---|--|
| | <p>Digitally handed in on a weekly basis as of week 3.</p> <p>Meeting conventions of writing a report</p> <p>Meeting conventions of details by lecturers Web Science</p> <p>Final portfolio containing</p> <p>Report with processed feedback as a final version</p> <p>Covering 7 weeks: 7 agendas and 7 minutes of meetings.</p> <p>PORTFOLIO ON BUSINESS</p> <p>Further details about assessment:</p> <p>The assignment consists of a research portfolio on how to set up a company in the Netherlands, including a written report on the research and drafting an invoice and a quotation, a SWOT-analysis and specifically focussing on the use of Social Media. Furthermore aspects such as other required documentation, taxpaying, payroll, premises and book keeping are to be considered.</p> <p>Assessment criteria</p> <p>Setting up a company with group members and description of services offered</p> <p>Consider a name and a logo – research on using names, style and colours through BIOP.</p> <p>Research on necessary certificates and diplomas</p> <p>Research on financial matters: payroll, taxpaying, book keeping, other payments</p> <p>Considering renting a property</p> <p>If needed: a possible business plan, but a SWOT analysis must be part of the portfolio</p> <p>Documentation such as an invoice, proposal and a leaflet</p> <p>Use of Social Media, including examples.</p> <p>The above will be placed in a group portfolio and handed in digitally at the end of the term.</p> <p>PRESENTATION</p> <p>The assignment consists of a group presentation on a designated topic, lasting 15 – 20 minutes including feedback and questions from class, in which each student speaks at least for 3 minutes, hence covering an equally divided balance between students in participation.</p> <p>Assessment criteria</p> <p>The presentation is assessed on the following criteria:</p> <p>Used aids in media, such as PowerPoint, Prezi, Rocket Slide etc, attractiveness of the presentation (max. 5 pts)</p> <p>Topic, complexness or execution of the assignment (max. 35 pts)</p> <p>Pronunciation (max. 20 pts)</p> <p>Structured presentation: head, body, tail, conclusion, including introduction of members, table of contents, attitude in front of class, meeting conventions for presentations (max. 20 pts)</p> <p>Interaction with class during questions (max. 20 pts)</p> <p>Students attending the presentation are required to ask questions, have a participating attitude and a keen eye for facts versus opinions.</p> | |
| Details on examination formats | In-term presentation and writing assignments, portfolio | |
| Instructional formats and education activities | The instructional format and educational activities consist of 7 x 4 classes in the form of workshops and lectures in which an proactive, participating attitude is expected; an in-term group presentation which forms part of the final grade, followed by a group portfolio. | |
| Contact hours for instructional formats and education activities | 31 | |
| Compulsory attendance | No | |
| Aids permitted | Reading requirements as indicated, dictionary. Presentation: to be decided by student(s). Portfolio: to be decided by student(s). | |

Year 3

Term 3

Research 3 - 3712IT332Z

| Study Year | Education Term | Name of Examination Component | | Graduation product designation | Study Load in Credits |
|--|---|-------------------------------|---------------------|--------------------------------|-----------------------|
| 3 | Term 3 | Research | | No | 2 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Research 3, 3712IT332A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | In the research courses the student develops the soft skills needed for successfully conducting applied research projects during their studies and in their professional life. The focus of this course is quantitative research. Quantitative research methodologies are discussed and put into practice in a small-scale study. | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Research | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | The student can: select an appropriate quantitative research methodology for a research problem; independently conduct a small quantitative study; draw conclusions from quantitative results; write a research report about a quantitative study | | | | |
| Details on examination formats | The grade will be based on the quality of the research paper and the presentation. | | | | |
| Instructional formats and education activities | Instructions and working on assignment. | | | | |
| Contact hours for instructional formats and education activities | 17 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | All | | | | |

Statistics 2 - 3712IT333Z

| Study Year | Education Term | Name of Examination Component | | Graduation product designation | Study Load in Credits |
|--|---|-------------------------------|---------------------|--------------------------------|-----------------------|
| 3 | Term 3 | Mathematics | | No | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Statistics 2, 3712IT333A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | This Class will give the student the Mathematical fundamentals for Statistics. Hypotheses, Estimating and Confidence Intervals are the topics. Also building and use Models will be an important part of this Class | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyze, Design, Realize, Advice, Research | | | | |
| Condition(s) for Participation | None, but students are expected to have the knowledge and skills of <i>Statistics 1, 3714IT145A</i> | | | | |
| Other details | None | | | | |
| Examination criteria | Models, Hypotheses, Estimating and Confidence Intervals | | | | |
| Details on examination formats | Written Exam | | | | |
| Instructional formats and education activities | Lectures | | | | |
| Contact hours for instructional formats and education activities | 24 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | None | | | | |

Operations Research - 3713IT334Z

| Study Year | Education Term | Name of Examination Component | | Graduation product designation | Study Load in Credits |
|--|--|-------------------------------|---------------------|--------------------------------|-----------------------|
| 3 | Term 3 | Mathematics | | No | 4 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Operations Research, 3713IT334A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | TThere are a lot of algorithms for optimizing problems. In Operations Research we will have a look at some of the Mathematical programming: Graphical/Simplex method, Inventory Models, Branch & Bound, Integer programming, some of General Models. | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyse,Design,Advise | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | Graphical/Simplex method, Inventory Models, Branch & Bound, Integer programming, some of General Models (Lagrange). | | | | |
| Details on examination formats | Written exam | | | | |
| Instructional formats and education activities | Lectures | | | | |
| Contact hours for instructional formats and education activities | 31 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | None | | | | |

Routing (CCNP 1) - 3712IT331Z

| Study Year | | Education Term | Graduation product designation | Study Load in Credits |
|--|--------------------|---|--------------------------------|-----------------------|
| 3 | | Term 3 | No | 3 |
| Examination Name and Code | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Routing (CCNP 1), 3712IT331A | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | | CCNP equips students with the knowledge and skills needed to plan, implement, secure, maintain, and troubleshoot converged enterprise networks. The CCNP curriculum was designed to reflect the job skills and responsibilities that are associated with professional-level job roles such as network engineer, systems engineer, network support engineer, network administrator, network consultant , and system integrator. Implementing IP Routing is one of the three courses. This course teaches students how to implement, monitor, and maintain routing services in an enterprise network. Students will learn how to plan, configure, and verify the implementation of complex enterprise LAN and WAN routing solutions, using a range of routing protocols in IPv4 and IPv6 environments. The course also covers the configuration of secure routing solutions to support branch offices and mobile workers. Comprehensive labs emphasize hands-on learning and practice to reinforce configuration skills. | | |
| Stage in the Bachelor programme | | In possession of the skills necessary for professionalisation | | |
| Competencies | | Design, Realize, Maintain | | |
| Condition(s) for Participation | | All Routing and Switching courses (CCNA 1, 2, 3 and 4) are prerequisite for all CCNP courses. Skills exam is only open for students which has passed the theory exam. | | |
| Other details | | None | | |
| Examination criteria | | Implement an EIGRP Based Solution, Given a Network Design and a Set of Requirements (25%) Implement a Multi-Area OSPF Network, Given a Network Design and a Set of Requirements (25%) Implement an eBGP Based Solution, Given a Network Design and a Set of Requirements (5%) Implement an IPv6 based solution, given a network design and a set of requirements (15%) Implement an IPv4 or IPv6 based redistribution solution, given a network design and a set of requirements (15%) Implement Layer 3 Path Control Solution (10%) Implement basic teleworker and branch services (5%) | | |
| Details on examination formats | | On-line theory test, individual practical test | | |
| Instructional formats and education activities | | Instructor-led theory sessions and hands-on exercises in the lab | | |
| Contact hours for instructional formats and education activities | | 31 | | |
| Compulsory attendance | | No | | |
| Aids permitted | | N/A | | |

Switching (CCNP 2) - 3712IT335Z/3715ERAS3Z

| Study Year | Education Term | | Graduation product designation | Study Load in Credits |
|--|--|---------------------|--------------------------------|-----------------------|
| 3 | Term 3 | | No | 3 |
| Examination Name and Code | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Switching (CCNP 2), 3712IT335A /3715ERAS3A | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | <p>CCNP equips students with the knowledge and skills needed to plan, implement, secure, maintain, and troubleshoot converged enterprise networks. The CCNP curriculum was designed to reflect the job skills and responsibilities that are associated with professional-level job roles such as network engineer, systems engineer, network support engineer, network administrator, network consultant , and system integrator.</p> <p>This course teaches students how to implement, monitor, and maintain switching in converged enterprise campus networks. Students will learn how to plan, configure, and verify the implementation of complex enterprise switching solutions. The course also covers the secure integration of VLANs, WLANs, voice, and video into campus networks. Comprehensive labs emphasize hands-on learning and practice to reinforce configuration skills.</p> | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | |
| Competencies | Design, Realize, Maintain | | | |
| Condition(s) for Participation | <p>All Routing and Switching courses (CCNA 1, 2, 3 and 4) are prerequisite for all CCNP courses.</p> <p>Skills exam is only open for students which has passed the theory exam.</p> | | | |

Mobile Development 1 - 3713MBDV1Z/3715ERAS6Z

| Study Year | Education Term | | Graduation product designation | Study Load in Credits |
|--|--|---------------------|--------------------------------|-----------------------|
| 3 | Term 3 | | No | 6 |
| Examination Name and Code | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Mobile Development 1, 3713MBDV1A3715ERAS6A | Written | No | Grade (10-100) | 100% |
| Content of Unit of Study | <p>The role of mobile computing devices in modern society can hardly be underestimated. In the Netherlands, about 30 percent of the families has one or more tablets. About sixty percent of the Dutch owns and uses a smartphone. This means the role of computing is changing drastically; information technology has become something you have in your pocket and use for things undreamt of twenty years ago.</p> <p>For professionals in Mathematical Engineering or Information Technology this means they have to have some skills in developing applications for these mobile devices. The kind of applications will differ widely, but the basics are the same.</p> <p>During this course, students will learn how to write applications for the Android platform. At the end, they will have written a full-fledged application which uses the hardware available.</p> | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | |
| Competencies | Analyze, Design, Realize and Research | | | |
| Condition(s) for Participation | None, but students are expected to have the knowledge and skills of <i>Object Oriented Programming 2, 3713IT213A</i> | | | |
| Other details | None | | | |
| Examination criteria | <p>After successfully completing this module, the student is able to:</p> <ul style="list-style-type: none"> Research the market and come up with an idea for a new mobile application Take an idea for a mobile application and translate this into a high-level design Develop the architecture of an Android application Implement the mobile application using a variety of tools Search and find resources to improve the application beyond the already known | | | |
| Details on examination formats | <p>This module will be examined by a practical exam. During the first term of the course, each student designs an Android application at a very high level (wireframes etc.) This design is evaluated by the teacher. After approval, the exam consists of creating this application during the second term, using the techniques learned during the first term.</p> <p>The application should use at least some of the specialized hardware available in a mobile device, such as GPS, gyroscope or camera.</p> <p>The deadline for the assignment is the Friday of the second exam week of the second term during which the course was taught. The deadline for the resit is the Friday of the second exam week of the exam Term after this.</p> | | | |

| | | |
|--|---|-----------------------------------|
| | Handing in after the deadline is an automatic fail of the assignment, with no feedback given. | |
| Instructional formats and education activities | <p>This course is split over two terms, with the examination being in the second term.</p> <p>During the first term, class will start with a presentation on the subjects of that day. After that, the teacher will write a short demonstration application, using the ideas and input from the students attending. The main idea here is to explore the possibilities of the technology, so this part of the lesson will have little preparation from the teacher. When this explorative phase is finished, students will work on assignments given, finishing them between classes.</p> <p>Also during the first term, students have to come up with an idea for a mobile application they would like to build themselves. They set up the rough idea by drawing some wireframes and describing the functionality envisioned in a few paragraphs. The final idea has to be approved by the teacher.</p> <p>During the second term, classes only consist of working on the application with the teacher being available for consultancy. The final result is a mobile app using the hardware of the mobile device.</p> | |

Term 4

Project Engineering Entrepreneurship - 3713IT341Z

| Study Year | Education Term | Name of Examination Component | | Graduation product designation | Study Load in Credits |
|--|----------------|--|---------------------|--------------------------------|-----------------------|
| 3 | Term 4 | Professionalization | | No | 10 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Project Engineering Entrepreneurship, 3713IT341A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | | <p>During a Term of ten weeks, the Engineering Entrepreneurship (EE) program challenges you to develop a business of your own technological idea. You will test the technological, personal and market feasibility of your idea, and finally present it to experts from the future profession.</p> <p>Through the Mathematical Engineering programme we deliver good and competent engineers to future employers. In conversations with the same future employers / the work field, we discovered there might be another asset we might incorporate in the programme. And so we did.</p> <p>Many companies told us that in addition to having technical knowledge, it is also imperative that technical students obtain entrepreneurial skills. This doesn't mean that we want you to become an entrepreneur. When working for a company, it is also important to have entrepreneurial skills and show entrepreneurial behaviour. Some of you might consider starting your own company.</p> <p>During the Engineering Entrepreneurship program, you will work on your own business idea by conducting a business feasibility study that describes how your technological idea could be implemented in the market. Your assignment will be two-fold. You will work on entrepreneurial aspects of your idea. Besides that you will be working on the technological development of your 'product'. In addition to obtaining entrepreneurial skills, this program also aims at being able to work in a team and reflect on yourself and your team members. The teams have to consist of a minimum of four students and a maximum of six. As a team you have your own coach from ME-IT who is assigned to guide you on the technical subject as well as on the progress of your project. We will also arrange guest lectures and coaches who are experienced in entrepreneurship or specific entrepreneurship-related topics. We strongly advise you to ask them for feedback on your plans, and ask them about the challenges you face.</p> <p>Each team is obliged to start this program with a self-chosen technology. This self-chosen technology has to be realistic, entrepreneurial and represent who you are as a team. The following requirement could be used to assess which idea is a strong starting point:</p> <p>You have to be able to build (part) of the technology yourself in order to proof technical feasibility (i.e. realistic);</p> <p>The technology has to be accomplished with an implementation strategy, so it would help if you already have an idea of who would pay for this (i.e. entrepreneurial);</p> | | | |

| | | |
|--|--|--|
| | <p>The technology has to fit your passions and interests as a team, because you will have to work hard on it and pitch your outcomes with passion (i.e. passionate).</p> <p>At the start of the programme we will organize a brainstorm session. During this session you will get the opportunity to formulate your team and chose your technologies(s). If you haven't been able to form a team or come up with your own idea during this session, you will be classified in teams by the coordinators of the programme.</p> <p>Your team will then follow a series of lectures to become acquainted with the different entrepreneurial topics. In addition to the lectures you will be working on your entrepreneurial assignment and make a real life prototype of the technology in order to test the technical feasibility of your idea. During the whole program you will be regularly coached by Inholland lecturers.</p> | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | |
| Competencies | Professionalization | |
| Condition(s) for Participation | None | |
| Other details | None | |
| Examination criteria | See project guide Engineering Entrepreneurship on Blackbaord | |
| Details on examination formats | <p>Your assignment consists of a business feasibility study (60%), a technical feasibility study (25%) and a personal feasibility pitch (15%).</p> <p>These reports should focus on determining the technical and entrepreneurial feasibility of a self-chosen technology</p> | |
| Instructional formats and education activities | See project guide Engineering Entrepreneurship on Blackbaord | |
| Contact hours for instructional formats and education activities | 26 | |
| Compulsory attendance | Yes | Assessment is partly based on active participation in the project and during the project meetings. In case of insufficient participation the project can be resit in the next academic year. |
| Aids permitted | | |

Troubleshooting (CCNP 3) - 3710IT424Z/3715ERAS4Z

| Study Year | Education Term | | Graduation product designation | Study Load in Credits |
|--|--|---------------------|--------------------------------|-----------------------|
| 3 | Term 4 | | No | 4 |
| Examination Name and Code | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Troubleshooting (CCNP 3), 3710IT424A /3715ERAS4A | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | This course teaches students how to monitor and maintain complex, enterprise routed and switched IP networks. Skills learned include the planning and execution of regular network maintenance, as well as support and troubleshooting using technology-based processes and best practices, in a systematic and ITIL-compliant approach. Extensive labs emphasize hands-on learning and practice to reinforce troubleshooting techniques | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | |
| Competencies | Realize, Maintain, Research, Professionalize | | | |
| Condition(s) for Participation | Routing (CCNP 1) Switching (CCNP 2) Skills exam is only open for students that have passed the theory exam | | | |
| Other details | None. | | | |
| Examination criteria | Implement an EIGRP Based Solution, Given a Network Design and a Set of Requirements (25%) Implement a Multi-Area OSPF Network, Given a Network Design and a Set of Requirements (25%) Implement an eBGP Based Solution, Given a Network Design and a Set of Requirements (5%) Implement an IPv6 based solution, given a network design and a set of requirements (15%) Implement an IPv4 or IPv6 based redistribution solution, given a network design and a set of requirements (15%) Implement Layer 3 Path Control Solution (10%) Implement basic teleworker and branch services (5%) | | | |
| Details on examination formats | On-line theory test, individual practical test. | | | |
| Instructional formats and education activities | Instructor-led theory sessions and hands-on exercises in the lab | | | |
| Contact hours for instructional formats and education activities | 31 | | | |
| Compulsory attendance | No | | | |
| Aids permitted | N/A | | | |

Mobile Development 2 - 3713MBDV2Z/3715ERAS7Z

| Study Year | Education Term | | Graduation product designation | Study Load in Credits |
|---|---|---------------------|--------------------------------|-----------------------|
| 3 | Term 4 | | No | 4 |
| Examination Name and Code | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Mobile Development 2, 3713MBDV2A/3715ERAS7A | Written | No | Grade (10-100) | 100% |
| Content of Unit of Study | <p>The role of mobile computing devices in modern society can hardly be underestimated. In the Netherlands, about 30 percent of the families has one or more tablets. About sixty percent of the Dutch owns and uses a smartphone. This means the role of computing is changing drastically; information technology has become something you have in your pocket and use for things undreamt of twenty years ago.</p> <p>For professionals in Mathematical Engineering or Information Technology this means they have to have some skills in developing applications for these mobile devices. The kind of applications will differ widely, but the basics are the same. During this course, students will learn how to write applications for the Android platform. At the end, they will have written a full-fledged application which uses the hardware available.</p> | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | |
| Competencies | Analyze, Design, Realize and Research | | | |
| Condition(s) for Participation | None, but students are expected to have the knowledge and skills of <i>Mobile Development 1, 3713MBDV1A</i> | | | |
| Other details | None | | | |
| Examination criteria | <p>After successfully completing this module, the student is able to:</p> <ul style="list-style-type: none"> Research the market and come up with an idea for a new mobile application Take an idea for a mobile application and translate this into a high-level design Develop the architecture of an Android application Implement the mobile application using a variety of tools Search and find resources to improve the application beyond the already known | | | |
| Details on examination formats | <p>This module will be examined by a practical exam. During the first term of the course, each student designs an Android application at a very high level (wireframes etc.) This design is evaluated by the teacher. After approval, the exam consists of creating this application during the second term, using the techniques learned during the first term.</p> <p>The application should use at least some of the specialized hardware available in a mobile device, such as GPS, gyroscope or camera.</p> | | | |

| | | |
|--|---|-----------------------------------|
| | The deadline for the assignment is the Friday of the second exam week of the second term during which the course was taught. The deadline for the resit is the Friday of the second exam week of the exam Term after this. Handing in after the deadline is an automatic fail of the assignment, with no feedback given. | |
| Instructional formats and education activities | <p>This course is split over two terms, with the examination being in the second term.</p> <p>During the first term, class will start with a presentation on the subjects of that day. After that, the teacher will write a short demonstration application, using the ideas and input from the students attending. The main idea here is to explore the possibilities of the technology, so this part of the lesson will have little preparation from the teacher. When this explorative phase is finished, students will work on assignments given, finishing them between classes.</p> <p>Also during the first term, students have to come up with an idea for a mobile application they would like to build themselves. They set up the rough idea by drawing some wireframes and describing the functionality envisioned in a few paragraphs. The final idea has to be approved by the teacher.</p> <p>During the second term, classes only consist of working on the application with the teacher being available for consultancy. The final result is a mobile app using the hardware of the mobile device.</p> | |

Year 4

Term 1

Advanced Data Disclosure - 3712IT411Z

| Study Year | Education Term | Name of Examination Component | | Graduation product designation | Study Load in Credits |
|--|--|-------------------------------|---------------------|--------------------------------|-----------------------|
| 4 | Term 1 | Data | | No | 5 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Advanced Data Disclosure, 3712IT411A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | <p>As discussed in the courses on relational databases, these databases form an effective solution for storing and retrieving structured data. Unfortunately, a large part of the data that is nowadays available is not structured, but comes in the form of text (unstructured data) or XML-documents (semi-structured data). For these types of data different solutions are necessary. The first part of this course treats so called NoSQL databases. These advanced databases can be used to disclose semi-structured data. The second part of the course focusses on information retrieval (IR) as a means for retrieving text documents.</p> <p>The course builds upon the databases courses and the courses on algorithms and data structures. Programming skills are needed for the assignments.</p> | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyze, Design | | | | |
| Condition(s) for Participation | Non, but students are expected to have a good knowledge of SQL and databases and programming. | | | | |
| Other details | None | | | | |
| Examination criteria | choose a suitable data storage and retrieval method for a real-world problem; explain the various ways to distribute databases; write queries for NoSQL databases; explain the working of various components of an information retrieval system; implement a small-scale information search engine; explain algorithms for link analysis; | | | | |
| Details on examination formats | The assignment must be sufficient to pass the course. The grade is determined by the exam consisting of open question. | | | | |
| Instructional formats and education activities | Instructions and hands-on exercises | | | | |
| Contact hours for instructional formats and education activities | 24 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | None | | | | |

Distributed Systems and Parallel Computing - 3712IT412Z

| Study Year | Education Term | Name of Examination Component | | Graduation product designation | Study Load in Credits |
|--|---|-------------------------------|---------------------|--------------------------------|-----------------------|
| 4 | Term 1 | Data | | No | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Distributed Systems and Parallel Computing, 3712IT412A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | As our machines get more and more cores, understanding concurrency is more important than ever before. Amdahl's law is gaining importance over Moore's law, and the focus is shifting from object-oriented programming towards concurrency-oriented programming. Every working programmer must learn to think about concurrency, parallelism and distributed systems. This course taps in the vast field out there and covers a wide range of concurrency models. Some classics like Threads and Locks, functional programming, agent/actor based frameworks will be discussed. Also some new paradigms like Data Parallelism and Lambda architecture will get attention. | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyse, Design, Realise | | | | |
| Condition(s) for Participation | None, but students are expected to the knowledge and skills of <i>Object Oriented Programming 2, 3713IT213A</i> | | | | |
| Other details | None | | | | |
| Examination criteria | (technology) portfolio on parallel computing | | | | |
| Details on examination formats | A student will create a (technology) portfolio that documents case studies on parallel computing they worked on. | | | | |
| Instructional formats and education activities | Class will be a mix of theory and practice. In the theoretical part, students learn the ideas behind important concurrency models. In the practical component students learn to design and solve concurrency problems | | | | |
| Contact hours for instructional formats and education activities | 24 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | Laptop recommended | | | | |

Advanced Java Programming - 3711IT425Z

| Study Year | Education Term | Name of Examination Component | Graduation product designation | Study Load in Credits | |
|--|----------------|-------------------------------|--------------------------------|-----------------------|------------------|
| 4 | Term 1 | Software Engineering | No | 5 | |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Advanced Java Programming, 3711IT425A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | | | | | |
| Stage in the Bachelor programme | | | | | |
| Competencies | | | | | |
| Condition(s) for Participation | | | | | |
| Other details | | | | | |
| Examination criteria | | | | | |
| Details on examination formats | | | | | |
| Instructional formats and education activities | | | | | |
| Contact hours for instructional formats and education activities | | | | | |
| Compulsory attendance | | | | | |
| Aids permitted | | | | | |

Research 4 - 3711IT422Z

| Study Year | Education Term | Name of Examination Component | | Graduation product designation | Study Load in Credits |
|--|---|-------------------------------|---------------------|--------------------------------|-----------------------|
| 4 | Term 1 | Research | | No | 2 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Research 4, 3711IT422A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | In the research courses the student develops the soft skills needed for successfully conducting applied research projects during their studies and in their professional life. The focus of this course is literature study. Students learn how to find and apply literature in a structured way during the various phases of the research cycle. | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Research | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | The student can: find high quality literature on a research topic; assess the quality of literature; independently conduct a literature study; write a short thesis about a literature study. | | | | |
| Details on examination formats | The grade will be based on the quality of the research paper and presentation. | | | | |
| Instructional formats and education activities | Instructions and working on individual assignment. | | | | |
| Contact hours for instructional formats and education activities | 17 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | All | | | | |

Term 2

Project Big Data - 3711IT421Z

| Study Year | Education Term | Name of Examination Component | | Graduation product designation | Study Load in Credits |
|---------------------------------|---|-------------------------------|---------------------|--------------------------------|-----------------------|
| 4 | Term 2 | Data | | No | 5 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Project Big Data, 3711IT421A | | Other Method | No | Grade (10-100) | 100% |
| Content of Unit of Study | Huge amounts of data are being collected by companies, governments, and individuals alike. Within these data a wealth of information is hidden, that has the potential to improve both business and quality of life. However, uncovering this information is like finding the proverbial needle in the data haystack. In this projects students are faced with a real-life data set and are challenged to store, transform, mine, and interpret it until it reveals its true potential. | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyze, design, research, and professionalize | | | | |
| Condition(s) for Participation | None , but students are expected to have a good programming and big data knowledge. | | | | |
| Other details | None | | | | |
| Examination criteria | <p>The student can:</p> <ul style="list-style-type: none"> manage and store large amounts of data in a such a way that it becomes ready for analysis; model a real-world problem as a big data task; handle software needed to analyze data; determine relevant data preprocessing techniques; apply data preprocessing techniques; integrate multiple data sources; determine relevant data mining techniques; apply data mining techniques; draw conclusions from results of data analysis; find relevant literature and use the literature during a project; professionally report on a big data project; integrate multiple techniques into a solution for a big data problem; identify ethical aspects of a big data project; work according to a project plan; perform managing tasks within a project group; communicate effectively and efficiently with all parties involved; divide work within a project team; effectively collaborate in a project team; write a well-structured report about a project; critically reflect on the effectively of the chosen methods. | | | | |
| Details on examination formats | The grade will be based on the quality of the research and the report, and the individual performance of the student. | | | | |

| | | |
|--|------------------------------|--|
| Instructional formats and education activities | Instructions and group work. | |
| Contact hours for instructional formats and education activities | 32 | |
| Compulsory attendance | Yes | Assessment is partly based on active participation in the project and during the project meetings. In case of insufficient participation the project can be resit in the next academic year. |
| Aids permitted | All | |

Data Warehousing and Business Intelligence - 3712IT422Z

| Study Year | Education Term | Name of Examination Component | | Graduation product designation | Study Load in Credits |
|--|---|-------------------------------|---------------------|--------------------------------|-----------------------|
| 4 | Term 2 | Data | | No | 2 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Data Warehousing and Business Intelligence, 3712IT422A | | Written | No | Grade (10-100) | 100% |
| Content of Unit of Study | A data warehouse is a collection of technologies aimed at enabling executives, managers or business analysts to make better and faster decisions. The right information in the right place at the right time with the right cost in order to support the right decision. This course will not only focus on this classical after-the fact business intelligence, but also on new models of business intelligence. Being the conceptual backbone of business intelligence, the analysis and design of data warehouses will be discussed. Different architectural solutions and connected components and modelling techniques will be discussed. Furthermore industry examples will be demonstrated and the applicability of dimensional modelling in industry best practices. | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyze, design, realize and research | | | | |
| Condition(s) for Participation | None | | | | |
| Other details | None | | | | |
| Examination criteria | Fundamental Concepts of BI Data quality and visualisation Market Basket Analysis and Datamining Data warehouse architecture Relational & Multidimensional design ETL techniques Data visualisation Industry focus | | | | |
| Details on examination formats | In a group you will work on a industry-topic of interest, perform additional research, build cube(s) for a business area and share your findings. | | | | |
| Instructional formats and education activities | Class will be a mix of theory and practice. In the theoretical part, students learn the ideas behind important concepts. In the practical component students learn to solve problems. | | | | |
| Contact hours for instructional formats and education activities | 24 | | | | |
| Compulsory attendance | No | | | | |
| Aids permitted | All available relevant sources | | | | |

Data Mining & Analysis - 3711IT411Z

| Study Year | Education Term | Name of Examination Component | | Graduation product designation | Study Load in Credits |
|------------------------------------|----------------|---|---------------------|--------------------------------|-----------------------|
| 4 | Term 2 | Data | | No | 4 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Data Mining & Analysis, 3711IT411A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | | <p>Companies use data about their customers to predict how changes in prices will affect what customers buy. Meteorologists use data collected by weather stations and satellites to forecast tomorrow's weather. Police officers need to determine whether signatures are genuine. Network Administrators must recognize malicious actions between all the traffic on a network. In all these examples the key is Data Analysis and Mining.</p> <p>Data mining is defined as the process of discovering patterns in data, lots of data. This course treats a wide variety of data analysis and data mining techniques, such as regression, dimension reduction methods, decision trees, clustering methods, Bayesian models, and instance-based learning. We treat the practical application of the techniques as well as the theories behind them. Especially the interpretation and evaluation of discovered structural patterns require theoretical analysis and qualification.</p> <p>To be applicable in any realistic setting data analysis and mining must be done automatically. In the course students get acquainted with two software packages: SPSS for statistical data analysis and Weka for data mining.</p> <p>When gigabytes become petabytes, data becomes Big Data. Big Data cannot be analyzed in reasonable time on a single machine. To deal with Big Data parallelization is needed. This course touches upon the fundamental parallelization techniques needed for handling Big Data.</p> <p>To understand data mining algorithms and evaluation techniques, it is necessary to master the concepts treated in the course statistics.</p> <p>Furthermore the course builds upon techniques from the database courses and the course on data warehousing and business intelligence. This course prepares for Project Big Data in the next Term.</p> | | | |
| Stage in the Bachelor programme | | In possession of the skills necessary for professionalisation | | | |
| Competencies | | Analyze and design | | | |
| Condition(s) for Participation | | None | | | |
| Other details | | None | | | |
| Examination criteria | | <p>The student can:</p> <ul style="list-style-type: none"> explain the goals of data mining; explain the different data mining tasks; explain the main five steps of the data mining process; convert a real-world problem into a data analysis or mining task; choose an appropriate data mining method for a real-world problem; independently explore a data set; by means of statistical or data mining software preprocess a real-world data set to prepare it for data analysis and mining; | | | |

| | | |
|--|--|--|
| | explain the working, advantages, and disadvantages of a number of prediction, classification, and clustering algorithms; manually apply a number of prediction, classification, and clustering algorithms to a small example data set; apply a number of prediction, classification, and clustering algorithms to a realistic data set by means of data mining software; set-up and conduct a data mining experiment; interpret the results of a data mining experiment; | |
| Details on examination formats | The exam consists of open questions. | |

Cryptography - 3711IT423Z

| Study Year | Education Term | Name of Examination Component | | Graduation product designation | Study Load in Credits |
|--|--|-------------------------------|---------------------|--------------------------------|-----------------------|
| 4 | Term 2 | Mathematics | | No | 3 |
| Examination Name and Code | | Examination Format | Examination session | Examination Scale | Weighting Factor |
| Cryptography, 3711IT423A | | Written | Yes | Grade (10-100) | 100% |
| Content of Unit of Study | Cryptography can be considered as part of Information Security. Cryptography can be found everywhere: Web browsers, on-line banking, wireless lan's, e-mail programs, cell phones, bank cards, RFID tags etc. Individual users, businesses and organizations worldwide can only communicate in a secure way over open (= unsafe) networks if cryptographic tools are used. Encryption, digital signatures, password-based authentication, are some of the basic cryptographic techniques to achieve secure communication and to prevent hackers and attackers to break into computer systems, steal information, change data etc. Cryptography plays an important role in the defense against such attacks, and that's why this course deals almost exclusively with studying cryptography and the underlying mathematics. | | | | |
| Stage in the Bachelor programme | In possession of the skills necessary for professionalisation | | | | |
| Competencies | Analyze and Design | | | | |
| Condition(s) for Participation | None | | | | |
